Protocol and runs
1
Protocol, endpoint, tests and margins written down in advance
2
Codebook trained once on the base corpus
3
Decoder chosen on validation text by a fixed rule
4
Stream runs of the three receivers, 600 steps each
5
Teacher-forced emulation on every step; real decoding on every 23rd step
Gap of real decoding $\leq 5\,\%$?
yes: teacher-forced
no: real decoding
6
Cost read at 90 % token accuracy on each operating curve
7
Paired bootstrap, sign-flip test, Holm; net rate and crossover
Measurement and analysis
