
Step n: messages $\mathbf{x}_1, \ldots, \mathbf{x}_{N_c}$, SNR γ_n
$(n-1) \bmod C_{\text{sel}} = 0$?
yes
Evaluate H_s for every slot and signal the choice of slot
no
Encode every token; send round 1 ($m_{k_0} = 6$ symbols per token)
Beam-search MAP decoding with the language prior and the memories
Open token with $q_t < \tau$ and shells left?
yes
Request the next shell; it is sent at unit power over the requested tokens
no
Deliver the message; append it to the context $\mathbf{h}$ (fast memory)
One optimizer step on $\mathcal{L}_n$ with the true text
$n \bmod C_\ell = 0$ for a level ℓ?
yes
Ship $\mathcal{Q}_b(\Delta_\ell)$, set both copies equal and record B_ℓ
no
Step $n + 1$
receiver
transmitter
signaling or synchronization on the air
